

## 1. MAIN FEATURES

The TOUCH Temperature Controller manages Wood Fireplaces and Boilers, for heating and domestic hot water production, with the possibility to integrate it to a Gas Boiler.

### Safety Rules

Read carefully the following safety regulations, in order to prevent accidents to people and things.

Before working on the hydraulic plant, please be aware of the following:

- Accident prevention measures
- Environmental protection measures
- National Institute for Work accidents measures
- Recognized prevention measures
- This manual is intended for qualified technical staff only
- Electrical wiring and connection must be performed by qualified technicians only
- The first installation of the hydraulic plant must be performed expert personnel

### Declaration of Conformity

#### Regulations:

EN 60730-1 50081-1  
EN 60730-1 A1 50081-2

#### Technical data

Supply: 230 Vac 50 Hz  $\pm$  10%  
Absorption: 2,5 VA  
Outputs Range: 5A 250 Vac  
Internal fuse: 3,15 A

#### Mechanical Characteristics

Material: PA  
Flush mount Installation: 3 Modules/ Wall  
Dimensions: Flush mount: 132x68x50 mm  
Degree of Protection: IP40

#### Installation conditions and Use

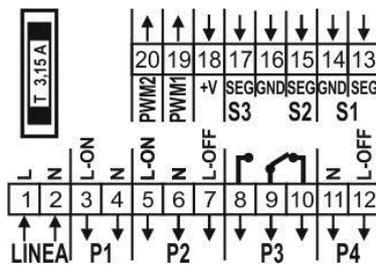

Operating Temperature: 0  $\div$  40  $^{\circ}$ C  
Storage Temperature: 0  $\div$  60  $^{\circ}$ C  
Umidity: 85% @25 $^{\circ}$ C

## 2. INSTALLATION

**⚠ Make sure that the Main Power Supply is OFF, before installing the device**

- Install the product in a dry environment with proper climatic conditions
- Insert a bipolar main switch complying to local regulations
- Avoid coupling the probe cables with these of power
- Use for wiring, cables with conductors of appropriate section and in according the rules
- Position the probes to detect correctly the temperature
- Make sure the probe wires are placed away from direct/indirect flame

## 3. ELECTRICAL CONNECTIONS

All the probe inputs and command outputs are controlled automatically according to the type of hydraulic/plumbing plant selected.

For electrical connections you must refer to Chapter 7 and the following paragraphs concerning the hydraulic/plumbing schematic drawings.

Fig.2 – Electrical connections

	Code	Connectors	Device	Characteristics
INPUTS	LINE	1 – 2	Voltage Supply	230 Vac 50 Hz $\pm$ 10%
	S1	13 – 14	Fireplace Temperature Probe	Operating Range: -50 $^{\circ}$ C $\div$ 125 $^{\circ}$ C
	S2	15 – 16	Sanitary (DHW) Boiler /Buffer Probe Flow Switch	NTC 10K Measure: -10 $\div$ 110 $^{\circ}$ C $\pm$ 1 $^{\circ}$ C NTC 100K Measure: -10 $\div$ 300 $^{\circ}$ C $\pm$ 1 $^{\circ}$ C
	S3	16 – 17	Ambient Probe/Thermostat Buffer, Collector Panel	PT 1000 Measure: -40 $\div$ 300 $^{\circ}$ C $\pm$ 1 $^{\circ}$ C Flow switch contact ON/OFF
16 – 17 – 18		Pressure Sensor	Operating Range: 0 $\div$ 3 bar / 0 $\div$ 3V	
OUTPUTS	P1	3 – 4	Pump 1	230 Vac 5A
	P2	5 – 6 – 7	Diverter Valve / Pump 2	230 Vac 5A
	P3	8 – 9 – 10	Boiler Integration Consent	Contact in exchange: COM.(9)-N.O.(8) - N.C.(10)
	P4	11 - 12	Service = Thermostat	230 Vac 5A
			Service = Grill	
			Combustion Air Damper	
Pump 2				
PWM1	19 – 16 o 14	Control PWM1	0-5Vdc, Frequency 1Khz, Duty Cycle 0-100%	
PWM2	20 – 16 o 14	Control PWM2		

## 4. Control Panel: USE AND FUNCTIONS

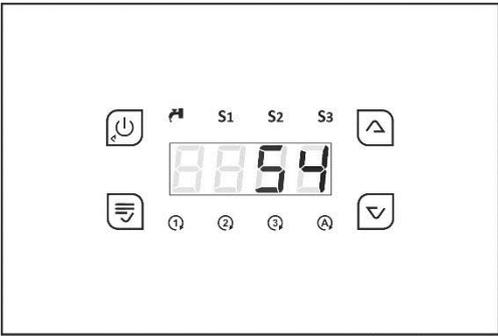

ON/OFF Exit the Menu Grill Service Air Damper Manual Start	<b>K1</b>				<b>K3</b>	Scroll/Increase Pump1 Test Probes Menu
Enter User Menu SET Shower Key	<b>K2</b>				<b>K4</b>	Scroll/Decrease Pump2 Test Probes Menu

Fig. 3 Main Screen

8854	S1 Probe Temperature	<b>S1</b>	S1 Probe Displayed
①	P1 Output Activated	<b>S2</b>	S2 Probe Displayed
②	P2 Output Activated	<b>S3</b>	S3 Probe Displayed Flashing: Ambient Thermostat open
③	P3 Output Activated		
	ON: Flow Switch Closed Flashing: Shower Function Activated	<b>A</b>	P4 Output Activated

## 5. FUNCTIONALITIES

### 5.1 ON/OFF

The controller is turned ON/OFF by applying prolonged pressure to **K1** key

- OFF-mode is displayed by **K1** key being turned-on
- When the controller is turned on, the following messages will appear
  - Product Code **t002**
  - Product Revision **r 0.1**
  - Configuration **CF01**

### 5.2 PROBE DISPLAY

The display shows the correct temperature sensor value **S1** (**S1** led is lit up).

- To enter the probe menu press either **K4** or **K3**, the temperature of Probe **S2** is displayed (**S2** Led flashes) or **S3** (**S3** Led flashes)
- By pressing **K3** or **K4** it is possible to scroll and check other connected probes
- To exit the Menu press **K1** or wait 10 seconds
- If the probe reading is below the minimum range of the sensor the message **Lo** appears
- If the probe reading is above the maximum range of the sensor the message **Hi** appears

### 5.3 SAFETY FEATURE

When this function is activated; **P11=1**, it starts a heat disposing process to remove excess heat buildup of the fireplace  
The management of the safety feature is explained in the plumbing/hydraulic schematic drawing paragraphs

### 5.4 ALARM FUNCTION

If the temperature measured by **Sensor S1** exceeds the value of the thermostat alarm **A08**

- An audible and visual signal is activated (the temperature flashes on the Display)
- **SILENCE** Function: The audible signal can be turned off for 5 minutes by pressing any key. If the controller remains in the alarm condition, the audible signal will start again.

### 5.5 ANTIFREEZE FUNCTION

If the temperature measured by **Probe S1** falls below the value of the Antifreeze Thermostat **A06**

- The output for Pump **P1** is turned on for **t01** time at intervals of **t02** time
- The display will show the writing **ICE**

### 5.6 PUMP P1 ANTISEIZE FUNCTION

If Pump **P1** remains inactive, also while OFF, for a time greater than Timer **t05**

- The output for Pump **P1** is turned-on for **t04** seconds
- The display will show the writing **BLP**

### 5.7 STANDBY FUNCTION

If the controller is OFF, and in **ALARM**, **ANTIFREEZE** or **ANTISEIZE FUNCTION** of Pump **P1**

- The controller automatically turns itself ON
- At the end of **ANTIFREEZE** or **ANTISEIZE of Pump P1** functions, the controller will turn itself OFF.
- At the end of **ALARM** function the controller will remain ON

### 5.8 PUMP P1 FUNCTIONING TEST

When the controller is OFF, prolonged pressure of **K3** key:

- **P1** output is activated for as long as the key is pressed and the display will show **tSt1**

### 5.9 PUMP P2 FUNCTIONING TEST

When the controller is OFF, prolonged pressure of **K4** key:

- **P2/P4** output is activated for as long as the key is pressed and the display will show **tSt2**

### 5.10 SERVICE OUTPUT

P4 SERVICE output is programmable from the Installer MENU by using parameter **P06**:

- **P06 = 0 DISABLED**: the output does not work.
- **P06 = 1 THERMOSTAT**: the output is activated if the temperature of **S1** probe is above Thermostat **A09**.
- **P06 = 2 GRILL**: press **K1** key to turn on/off the output.
- **P06 = 3 AIR DAMPER**: this output is used to manage an Air Damper to adjust for Combustion Air Flow.

### 5.11 AIR DAMPER

To make use of the Air Damper function set parameter **P06 = 3**

**If the output is ON the Air Damper will be Open, if the output OFF the Air Damper will be closed.**

The Air Damper will stay Open as long as the temperature of S1 probe is below **A05** Thermostat. The Air Damper will close when the temperature is above this Thermostat.

- If **P12 = 1** the **Start Manual** function is enabled:

If S1 Temperature is below **A01**, the Air Damper will Close. During the Ignition phase of the Fireplace, by pressing **K1** key the Air Damper will Open manually (the output corresponding Led will flash). When the Temperature falls below **A01**, Thermostat after **t06** time the Air Damper will close automatically.

### 5.12 PROBE TYPE

The controller can manage NTC10K, NTC100K and PT1000 type of probes, which can be configured by using parameters **P01**, **P02**, **P03** and **P17** of the Installer MENU.

- **Fireplace Probe:** **P01 = 0** → NTC10K; **P01 = 1** → NTC100K; **P01 = 2** → PT1000
- **DHW Boiler Probe/ Tall Buffer :** **P02 = 0** → NTC10K; **P02 = 1** → NTC100K; **P02 = 2** → PT1000
- **Short Buffer Probe:** **P03 = 0** → NTC10K; **P03 = 1** → NTC100K; **P03 = 2** → PT1000
- **Ambient Probe:** **P04 = 0** → NTC10K; **P04 = 1** → NTC100K; **P04 = 2** → PT1000
- **Collector Probe:** **P17 = 0** → NTC10K; **P17 = 1** → NTC100K; **P17 = 2** → PT1000

### 5.13 S3 INPUT CONFIGURATION

Parameter **P05** can be enabled to manage the following:

- **P05 = 0**, S3 input = **DISABLED**
- **P05 = 1**, S3 input = **PRESSURE SENSOR**
- **P05 = 2**, S3 input = **AMBIENT SENSOR**
- **P05 = 3**, S3 input = **AMBIENT SENSOR**

### 5.14 PRESSURE SENSOR

If **P05=1** pressure sensor management is enabled on probe **S3**.

If **P07=1** pressure sensor errors are enabled:

- If Water Pressure < **Pr1** display shows **PrLo** + audible signal.
- If Water Pressure > **Pr2** display shows **PrHi** + audible signal.

### 5.15 PROBE SENSOR/AMBIENT THERMOSTAT

Parameter **P05** can be setup to enable the management of the Probe Sensor/Ambient Thermostat

- If the Ambient Temperature **S3>b01** or the Ambient Thermostat is **Open** (**S3** Led flashing) and there is **NO** DHW request
- The Air Damper is closed

The hydraulic/plumbing plants with a Buffer tank; if the Ambient Temperature is **S3>b01** or the Ambient Thermostat is **Open** the Heating Pump will be turned off (deactivated)

### 5.16 SHOWER

(**P13=1**) if used in specific hydraulic/plumbing plants where it is required, it can be enabled by pressing **K2** key for 3 sec:

- The display shows **T03** time (minutes) giving (DHW) Domestic Hot Water priority;
- **K3** and **K4** keys increase /decrease the duration
- Wait 5 seconds to save and exit from this setup.
- To exit without saving press **K1** key.

**T03** time is signaled by  led flashing, giving priority to DHW production based on the type of hydraulic/plumbing plant in use.

This function is over when

- **T03** time has expired.
- By pressing again **K2** key
- If the temperature of **S1** Probe is greater than **A07** Safety Thermostat:

And **T03=0**, the shower function can be disabled by pressing **K2** key.

## 5.17 SOLAR CIRCUIT

### Buffer Tank Loading:

The Solar Pump is activated:

- If the Temperature of (S3) > A33 and  $\Delta$  (S3-S2) > d02

The Buffer Loading is disabled once the Buffer Comfort Thermostat has been reached on S2 (A20).

### Collector and Buffer Safety:

If the Temperature of the Manifold (S3) > A35 (Collector Safety Thermostat) the Solar Pump is turned on again and fills the Buffer Tank until A23 high temp. Thermostat has been reached.

### Collector Protection:

If the Collector Temperature (S3) > A36 (Collector Safety Thermostat) the solar pump is turned off

### Antifreeze:

When this function is enabled (P09=1) if the temperature detected by S3 probe (even while the controller is OFF) falls below the Antifreeze Thermostat A34 the solar pump is turned on for t04 time at intervals of t05 time

## 5.18 WOOD INTEGRATION PRIORITY (Hydraulic/Plumbing plants including Buffer Tank)

This feature gives priority to the integration of the fireplace instead of the Gas boiler.

Se P10=1 priority is given to the wood fireplace in managing the integration of the Buffer Tank instead if the Gas Boiler.

## 5.19 PUMPS MANAGEMENT WITH PWM CONTROL

P18 and P19 parameters are used to enable and select the operating mode of the PWM1 and PWM2 signals, to manage the pumps provided in the hydraulic/plumbing schemes:

- PWM1: P18 = 0 → Disabled; P18 = 1 → Manual; P18 = 2 → Automatic
- PWM2: P19 = 0 → Disabled; P19 = 1 → Manual; P19 = 2 → Automatic

### PWM Disabled:

The pumps are controlled exclusively via 230V outputs

### PWM Manual:

The PWM duty cycle which determines the speed of the pumps is set with the following parameters:

- U06 if PWM1 with Heating profile (Fireplace Pump)
- U16 if PWM2 with Heating profile (Heating Pump)
- U26 if PWM2 with Solar profile (Solar Pump)

### Automatic PWM:

In relation to the type of pump, the PWM duty cycle is calculated on the basis of the temperature of the fireplace probe, high Buffer Tank probe or solar collector probe and can vary within the following ranges:

- Between U01 and U02 if PWM1 with Heating profile (es. 85 ÷ 5 %)
- Between U11 and U12 if PWM2 with Heating profile (es. 85 ÷ 5 %)
- Between U21 and U22 if PWM2 with Solar profile (es. 15 ÷ 95 %)

Fireplace Pump speed change is enabled within the following temperature range:

- Between A01 and A01+A80 in heating management (ex. if A01=35°C, A80=20°C then range: 35 ÷ 55 °C)
- Between A01 and A01+A81 in DHW management (ex. if A01=35°C, A81=15°C then range: 35 ÷ 50 °C)

Heating Pump Speed change is enabled within the following temperature range:

- Between A04 and A04+A82 (ex. if A04=45°C, A82=20°C then range: 45 ÷ 65 °C)

Or if the Buffer Tank is present

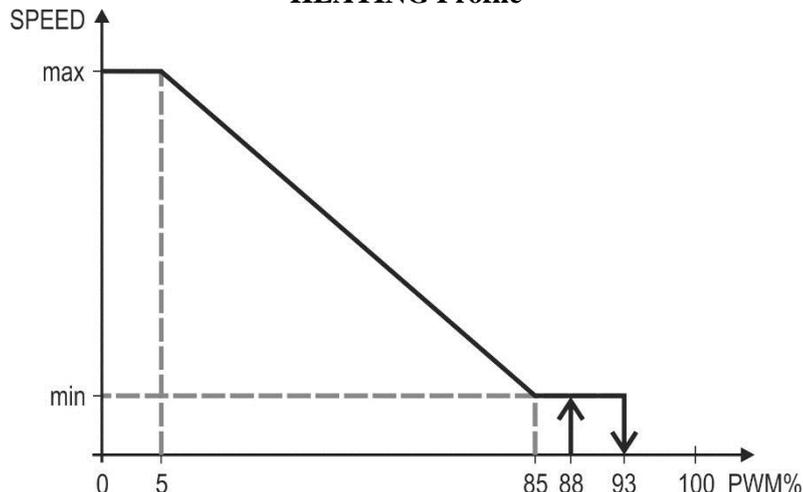

- Between A17 and A17+A82 (ex. if A17=45°C, A82=20°C then range: 45 ÷ 65 °C)

Solar Pump speed change is enabled within the following temperature range:

- Between A33 and A33+A82 (ex. if A33=45°C, A82=20°C then range: 45 ÷ 65 °C)

The profile of the PWM signal, Heating or Solar, is selected automatically on the basis of the pump that needs to be managed and the following are the profiles of the pumps that can be found on the market:

### HEATING Profile

On the basis of this profile it is advisable to set the PWM duty cycle parameters as shown below:

### PWM1

Vmin: U01 ≤ 85%

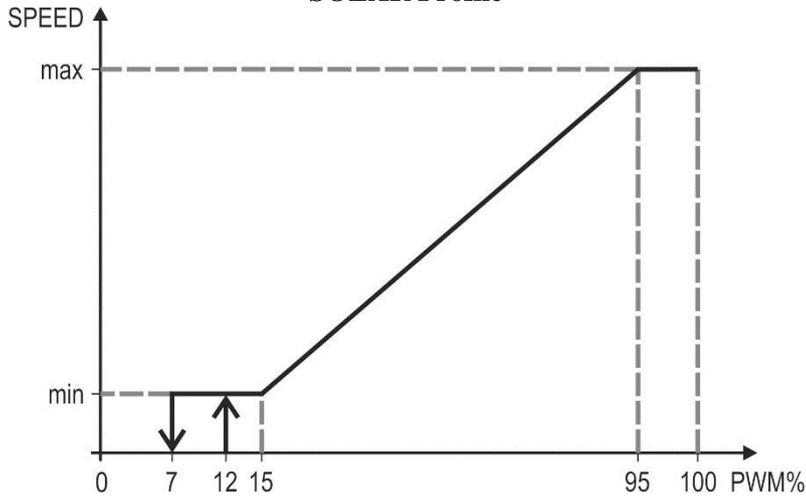

Vmax: U02 ≥ 5%

### PWM2

Vmin: U11 ≤ 85%

Vmax: U12 ≥ 5%

### SOLAR Profile

On the basis of this profile it is advisable to set the PWM duty cycle parameters as shown below:

#### PWM2

Vmin: U01 >= 15%

Vmax: U02 <= 95%

In the following conditions the PWM can be setup with the following parameters:

- **ANTIFREEZE:** U03, U13 e U23
- **SAFETY:** U04, U14 e U24
- **ANTISEIZE:** U05, U15 e U25

## 6. MENU'

### 6.1 MAIN MENU

To enter into the main menu simply **click** on **K2** key:

- Keys **K3** and **K4** are used to scroll through various parameters signaled by the corresponding flashing led.
- Press **K2** key to modify (the led remains solid while value flashes).
- Keys **K3** and **K4** are used to change the parameter value.
- Press **K2** to save the new value.
- Press **K1** to exit without saving.
- Press **K1** again to exit the Menu or wait 30 seconds.

## 6.2 INSTALLER MENU

Only **QUALIFIED PERSONEL** must access this MENU , because if the set parameters are changed this could make the product completely unsuitable for the application.

- To enter into the INSTALLER MENU press at the same time **K2** and **K4** keys for 3 seconds.
- To scroll through the parameter codes use **K3** and **K4** keys.
- To view the value of a parameter and to enter modification mode press **K2** key.
- To modify the value press **K3** and **K4** keys.
- To save the new value press **K2** key.
- To exit without saving press **K1** key.
- Press **K1** again to exit the Menu or wait 60 seconds.

Name	Symbol	Pins
Fireplace Pump	P1	3 - 4
	PWM1	19 - 16 o 14
Service	P2	5 - 6 - 7
Boiler Integration	P3	8 - 9 - 10
Heating Pump	P4	11 - 12
	PWM2	20 - 16 o 14
Fireplace Probe	S1	13 - 14
Low Buffer Probe	S2	15 - 16
High Buffer Probe	S3	16 - 17

#### 7.15.1 Parameters

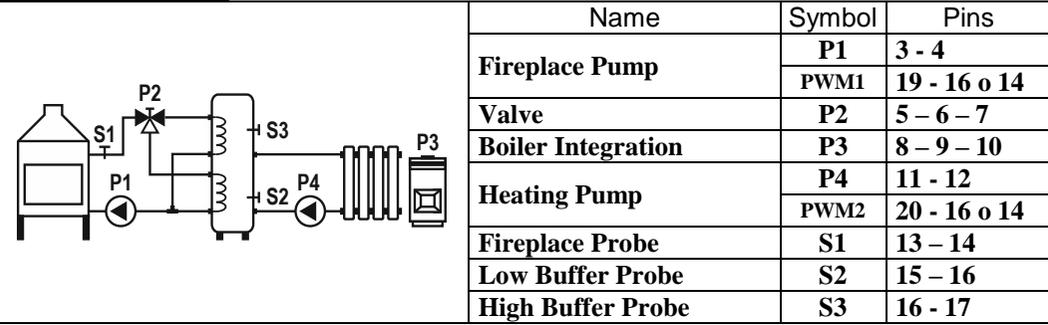

Cod.	Led	Description	U.	Min.	Def.	Max
A01	①	Minimum temp. Pump Thermostat	°C	20	40	90
A09	②	Service Thermostat	°C	20	50	90
A19	③	Thermostat Integration on High Buffer Tank	°C	20	45	90
A17	Ⓐ	Heating Pump Thermostat on High Buffer Tank	°C	20	45	90
d01	S1+S3	Differential Thermostat Δ (S1-S3)	°C	2	5	20

#### 7.15.2 Operating Principle

S1	S3	Δ (S1-S3)	Management	P1	P2	P3	P4
S1 < 5° [A06]			Antifreeze	ON			
5° < S1 < 40° A06 < S1 < A01			Fireplace OFF	OFF			
S1 > 40° S1 > A01		Δ < 5° [d01]		OFF			
		Δ > 5° [d01]	Buffer Loading	ON			
S1 > 75° [A05]	See Par. 5.11		Air Damper	OFF	P2		
S1 > 45° [A09]	See Par. 5.10		Service	ON			
	S3 > 45° [A19]		Integration (9 - 10 Open)	OFF		P3	
	S3 > 45° [A17]		Heating	ON			P4

\* If P06=3

### 7.16 Hydraulic Plant 16 (ConF = 16)

Name	Symbol	Pins
Fireplace Pump	P1	3 - 4
	PWM1	19 - 16 o 14
Valve	P2	5 - 6 - 7
Boiler Integration	P3	8 - 9 - 10
Heating Pump	P4	11 - 12
	PWM2	20 - 16 o 14
Fireplace Probe	S1	13 - 14
Low Buffer Probe	S2	15 - 16
High Buffer Probe	S3	16 - 17

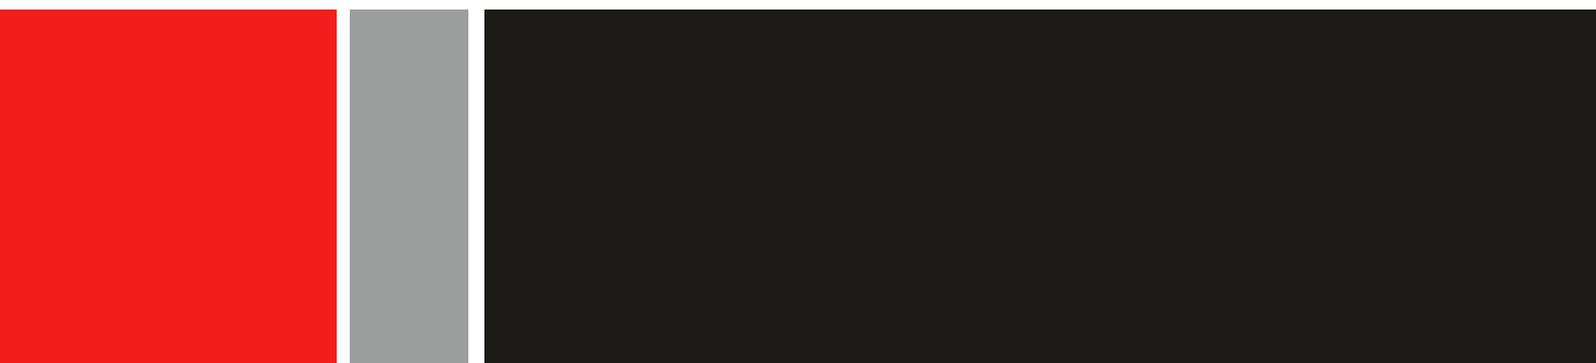

#### 7.16.1 Parameters

Cod.	Led	Description	U.	Min.	Def.	Max
A01	①	Minimum temp. Pump Thermostat	°C	20	40	90
A24	②	Thermostat Valve for Sanitary (DHW) Priority	°C	20	70	90
A19	③	Thermostat Integration on High Buffer Tank	°C	20	45	90
A17	Ⓐ	Heating Pump Thermostat on High Buffer Tank	°C	20	45	90
d01	S1+S3	Differential Thermostat Δ (S1-S3 e S1-S2)	°C	2	5	20

#### 7.16.2 Operating Principle

S1	S3	Δ (S1-S3)	Δ (S1-S2)	Management	P1	P2	P3	P4
S1 < 5° [A06]				Antifreeze	ON			
5° < S1 < 40° A06 < S1 < A01				Fireplace OFF	OFF			
S1 > 40° S1 > A01	S3 < 70° S3 < A24	Δ < 5° [d01]			OFF			
		Δ > 5° [d01]		High Buffer Loading	ON			
S1 > 40° S1 > A01	S3 > 70° S3 > A24		Δ < 5° [d01]		OFF			
			Δ > 5° [d01]	Low Buffer Loading	ON			
	S3 > 70° S3 > A24			Low Buffer Loading	ON	P2		
	S3 > 45° [A19]			Integration (9 - 10 Open)	OFF		P3	
	S3 > 45° [A17]			Heating	ON			P4
